

Adobe Acrobat Forms with Adobe LiveCycle Designer

One-Day Course

Windows

Course Overview:

In this course, you'll learn how to create fillable, dynamic, electronic forms in both Adobe Acrobat and Acrobat LiveCycle Designer. PDF-based forms are the best way to quickly create and manage interactive, cross-platform electronic forms while maintaining document integrity. You'll discover how to build PDF-based forms from the ground up, including how to set up forms from scratch, and work with existing form files. You'll learn how to manage various form objects, create master and body pages, work with templates, and how to set up how form data should be submitted. From there, you'll see how to distribute your forms to ensure that they work across various platforms.

Course Content:

- About Acrobat, LiveCycle Designer and PDF-based Forms
- Creating form field objects in Adobe Acrobat
- Setting field properties
- Setting field calculations in Acrobat
- Establishing form submission options
- Building Forms from Scratch in LiveCycle Designer
