

(X)HTML

One-Day Course

Windows and Macintosh

Course Overview:

Upon completion of this course, you will have a solid working knowledge of (X)HTML, the foundation language of Web pages. Students will learn the basic structure of an HTML document, and learn to read and edit code directly. This helps the student understand what programs like Dreamweaver are actually doing. We will explore tags and attributes to format text, paragraphs, images, links, and buttons. This is a hands-on course where students will create a web site complete with links, text and images.

Course Content:

- Introduction to HTML
- The Structure of HTML
- The HTML Body, Head and Title Elements
- XHTML and HTML
- Using HTML Comment Tags
