

Microsoft Excel 2013 Macros Intermediate

One-Day Course

Windows

Course Overview:

Once you have taken the Excel 2013 Macros One Day Introduction course you will be ready to learn how to utilize Visual Basic in creating advanced macros.

Course Content:

If then Else Statement

- Use an If then Else statement to control the statements in a macro (similar to using the IF function in Excel).

Loop Structure

- Use the Do Loop structure to repeat a macro multiple times.

If then Elself Statement

- Use nested If then Elself Statements in a macro.

Case Statement

- Discover the use of Case statements that are an alternative to using IF macro statements.

For Next

- Use the For Next Loop to repeat a macro multiple times.

User-Defined Function

- Create your own function if Excel has not provided one for calculations that you do repetitively.

Events

- Call macros automatically when a file is opened or when a file is closed.
